

Jennifer Roques

Senior Software Engineer

St. Louis, MO | jenniferroques@gmail.com | 314-913-2464 | linkedin.com/in/jenniferroques | github.com/jenroques

EXECUTIVE SUMMARY

Senior Software Engineer with 6+ years of experience designing and delivering scalable production applications in complex enterprise environments. Strong background in React, TypeScript, and Java-based backend systems, with a focus on reliability, performance, and engineering quality. Experienced collaborating across 20+ engineering teams to align technical solutions with enterprise standards and business objectives. Recognized for mentorship, cross-functional influence, and translating ambiguous requirements into maintainable, high-impact systems.

CORE COMPETENCIES

- Scalable Application Architecture
- React 18 & TypeScript Development
- Java & Spring Boot APIs
- Production Support & Reliability
- Cross-Team Engineering Collaboration
- System Design Participation
- Engineering Standards & Code Quality
- Mentorship & Technical Leadership
- AI-Assisted Development Workflows
- Micro-Frontend Patterns

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Wells Fargo (2023–Present)

- Design and implement scalable, production-ready application features using React and Spring Boot.
- Collaborate across 20+ engineering teams to align on architectural standards, shared services, and enterprise integration patterns.
- Translate complex, cross-functional requirements into maintainable and reliable technical solutions.
- Participate in architectural discussions to improve system scalability and long-term sustainability.
- Support high-availability production systems, resolving issues and strengthening operational resilience.
- Implement reusable UI components and backend services improving development efficiency across teams.
- Improve engineering standards through structured code reviews and documentation.
- Mentor engineers across projects, guiding debugging approaches, design tradeoffs, and professional growth.

- Leverage AI-assisted tools to enhance productivity while maintaining strong validation and quality standards.

Software Engineer Apprenticeship — Accenture (2022–2023)

- Developed full-stack web applications using modern JavaScript frameworks and Java-based backend services.
- Built reusable frontend components and RESTful API integrations supporting scalable business functionality.
- Collaborated with cross-functional teams to deliver high-quality features in agile enterprise environments.
- Participated in system design discussions and contributed to architectural improvements.
- Supported production deployments and resolved customer-impacting issues to maintain system reliability.
- Improved code quality through peer code reviews, documentation, and adherence to engineering best practices.

SELECTED ACCOMPLISHMENTS

- Graduate, Wells Fargo Everyday Leader Program (2025) — Leadership development focused on influence and strategic impact.
- Selected Junior Advisor (2026) — Contributing advisory perspective and mentorship within organizational initiatives.
- Brand Ambassador, Grace Hopper Celebration 2025 — Represented Wells Fargo while engaging and advocating for diversity in engineering.
- Mentored 5+ engineers across onboarding, design reviews, and production debugging initiatives.
- Contributed to cross-team initiatives improving deployment reliability and reducing recurring production defects.

EDUCATION

Software Engineering — Flatiron School
Computer Science — National University
